

MB Docket No. 03-185 Digital LPTV & Television Translators proposed rule making.

Comments from Cruze Electronics

Cruze Electronics operates and maintains over 120 Television Translators in Oklahoma, Texas and New Mexico. I have been providing this service to TV Clubs, TV stations and individual operations for 39 years.

I have read and study the comments filed by the NTA / National Translator Association. I am full agreement with these comments. I hope the FCC will take NTA comments and Expedite the DTV service for Television Translators as soon as possible.

I would like to point out important following issues:

- A. That Channels 52 to 69 can be used during the DTV transition period.
- B. That existing equipment can be used for DTV broadcast providing it is properly modified and meets FCC specifications using a simple mask filter.
- C. That existing analog Television Translators can be Grand Fathered to DTV transmission as a minor change.

Respectfully submitted

Cruze Electronics
Arnold Cruze
